

After the splice box is melted install the box

Overview

Once the splicing is complete, carefully place the fibers into the joint box. Close the joint box, ensuring it is sealed tightly to protect against environmental factors. This document describes the installation of optical fiber with both single fiber and/or ribbon fiber splices into Optical Splice Enclosure (OSE) metal splice trays (Figure 1). Make sure you read and understand this instruction as well as instructions provided with related assemblies before. om the end of cable and strip the protective layers. Process steps for splice modules fiber optic installation: Advantages of fusion splicing: Mechanical splice connectors use precision-engineered guides and index gel to hold two fiber ends in. These enclosures play a vital role in protecting spliced fiber optic cables from environmental hazards such as moisture, dust, and extreme temperatures, ensuring long-term durability and optimal performance. According to the sealing method, there are heat shrinkable sealing type and.
