

Ceramic ferrule with fiber optic cable

Overview

Ceramic ferrules are well known for having high durability and the highest levels of dimensional control, making them suitable for use in all fiber applications (both singlemode and multimode) specified in TIA/EIA-568-B. 1 cabling architecture standards. 5 mm stainless steel or ceramic (zirconia) fiber optic ferrules for constructing pigtailed fiber optic patch cables and assemblies. Kyocera's extrusion molding process creates ferrules with excellent coaxiality, and our precision machining ensures excellent concentricity with precise. Our Standard Ferrules are typically used as sub-components within fiber optic connectors, but can also be integrated in various specialized applications. They are made of zirconia ceramic, which offers the highest performance and durability of all ferrule material types. Single-mode optical fibers require precise bore diameter tolerances; any mismatch will lead to reduced light transmission, creating. Featuring high-precision Zirconia Ceramic ferrules for minimal signal loss, our selection includes industry-standard SC, LC, ST, FC, and MPO/MTP® interfaces.
