

Core switches are shut down daily

Overview

Problem: Power outages or sags can cause network equipment to lose power unexpectedly, leading to data loss, corrupted configurations, or network downtime. We have a pair of Dell N3224P-ON switches and today's morning my colleague gave me a task and instructions to remove some unused VLANs. I'm sure I removed the correct VLANs. When I saved the configuration, everything stopped working and now we don't know what to do. We already rebooted both. Abrupt disconnections during network communication may increase the risk of processes entering the 'D state' or applications lingering in the 'CLOSE WAIT' state. Furthermore, frequent restarts might contribute to additional wear and tear on the networking equipment, sparking concerns about the. A network switch failure can disrupt business operations by causing connectivity issues, packet loss, and downtime for connected devices.
