

DPAP Distribution Box

Overview

They range from simple 4 hole distribution boxes to the large 'Rhino' 10 hole box. All boxes are made from robust polypropylene (that will never rust) and are supplied with seals, and lockable green (pedestrian rated) covers to blend into landscaped environments. Thanks to its low profile, it is ideal for use in suspended ceilings. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. The Dalap Flexitech PADB horizontal distribution box made of solid plastic is used to connect standard duct with the Flexitech duct system. They are available in different variants: with fixed master cable, field-assemblable and with an M12, M16 or M23 connection. The groove contours of electronic distribution boxes and the very narrow grooves of micro-distribution housings are seamlessly sealed with the sealing foams of the polyurethane-based FERMAPOR K31 or the silicone-based FERMASIL product families.
