

## **Does a single-mode fiber optic cable require a simplex adapter**

### **Overview**

However, we'd recommend using a duplex connector for dual fiber transceiver and simplex connectors for a single fiber (BiDi) transceiver. There are currently not very many pre-made \* simplex \* multi-mode fiber cables available on the market. Simplex single-mode fiber is typically used in scenarios where data only needs to be sent in one direction, such as in sensor application like a fire alarm system that sends signals from detectors to a control panel might use simplex fiber. But which one is right for your project?

**SC/APC Simplex Adapter:** This adapter features a single SC/APC connector on each end, facilitating the connection. Multimode fiber optic cable has a large-diameter core that is much larger than the wavelength of light transmitted, and therefore has multiple pathways of light-several wavelengths of light are used in the fiber core. Multimode fiber optic cable can be used for most general fiber applications.
