

Dual LC Interface

Overview

An SFP duplex LC connector is a fiber optic interface used in many small form-factor pluggable (SFP) optical transceivers to enable full-duplex optical communication. The connector integrates two LC (Lucent Connector) interfaces in a single compact housing, allowing one fiber to transmit optical. LC and duplex LC are both types of fiber optic connectors used for connecting fiber optic cables. They are widely used in. This article explains what Duplex LC connectors are, how they work, the difference between single-mode and multimode use, how to choose and maintain them, and why they remain central to fiber network design. LC stands for Lucent Connector, named after the company that first developed it. The package space saved means 4x more ports on the same patch panel; data-center managers know that is measured in rack units furniture and cubic feet of cooling. Units are tested and compatible with RB260GS, RB2011LS, RB2011LS-IN, RB2011UAS-IN, RB2011UAS-RM, RB2011UAS-2HnD, RB2011UAS-2HnD-IN, and CCR1036-12G-4S. MikroTik makes networking hardware and software, which is used in nearly all countries.
