

Dual-fiber optical module connection power failure restart

Overview

The solution is to unplug the fiber and reinsert it into the SFP module interface until a “click” sound is heard, indicating the fiber connector and SFP module are properly connected. You can replace the optical fiber with a new one to check whether the fault is caused by the optical fiber. Last 300 seconds input rate 0 bytes/sec, 0 packets/sec Last 300 seconds output rate 0. I have a problem with the SFP module on my C3750 Switch. Port not UP Taking 10G SFP+/XFP optical module as an example, when the optical port of the optical module can not be UP when interconnecting with other devices, it can be troubleshooted from the following five. However, even in well-designed infrastructures, engineers frequently encounter issues such as SFP modules not being detected, no link light after installation, or unstable fiber connections. These problems can disrupt network performance and require systematic troubleshooting to resolve quickly. In. When SFP failure occurs, it's important for technicians to figure out the reason immediately and repair it, otherwise, the 1 Gigabit link may break out.
