

Energy Internet Pakistan

Overview

In its updated NDC (2021), Pakistan committed to cut its GHG emissions in 2030 by up to 50% relative to a BAU scenario (unconditional target of 15% and conditional target of 35%). CO2 emissions from fuel combustion dropped sig. In its updated NDC (2021), Pakistan committed to cut its GHG emissions in 2030 by up to 50% relative to a BAU scenario (unconditional target of 15% and conditional target of 35%). CO2 emissions from fuel combustion dropped significantly in 2022 to around 163 MtCO2 (-18% compared to 2020 historical peak), partly due to lower coal use in the power se. Per capita consumption is about 0.5 toe, including 478 kWh of electricity (2022). The country's total consumption dropped by 10% in 2022, after a rapid increase between 2014 and 2021 (4%/year). The progression was more moderate between 2008 and 2013 (1.5%/year). Graph: CONSUMPTION TRENDS BY ENERGY SOURCE (Mtoe) Interactive Chart Pakistan Total Ener. Oil production has fluctuated around 4-5 Mt since 2012 (4.1 Mt in 2022). Production supplies around 20% of the country's needs. Crude oil imports decreased slightly to 7.5 Mt in 2022, after two years at a higher level (about 9 Mt in 2020 and 2021). Interactive Chart Pakistan Crude Oil Production AEDB, Alternative Energy Development Board, is the national agency for the promotion of renewables. The new Alternative and Renewable Energy Policy (ARE, 2019) included a target of at least 20% of alternative and renewable energy (excluding hydroelectricity) in the power capacity in 2025 and 30% in 2030. With hydropower, this corresponds to a share.
