

Fiber Optic Interference Equipment

Overview

Fiber testers provide the precision needed to install, certify, and maintain high-speed optical networks. This category includes OLTS certifiers, OTDRs, optical power meters, light sources, and visual fault locators. WLPI fiber optic measurement solutions enable precise measurements in highly sensitive and demanding applications where interference resistance is essential. They are available for measuring strain, pressure, displacement, and temperature. The fundamental principle behind fiber optic technology – the transmission of data via light pulses – makes it uniquely suited. FiBO Interferometers provide a complete solution for fiber optic (FO) connector endface testing and inspection. This geometry will determine which areas come into contact when two Fiber Optic connectors or termini are mated. The MATRIQ Doppler 1000 series combines all key components for photon Doppler velocimetry (PDV) in one compact instrument.
