

Fiber optic cable routing channel 6

Overview

The FiberRunner® 6x4 Channel can be used with fittings and brackets to design a routing system to segregate, route, and protect fiber optic and high-performance copper cables. The cable routing channel accepts cable retainers or a hinged cover. With a maintained minimum of a 2-inch bed radius, your fittings are made to better protect your cable from being bent or damaged. It also provides a versatile. CommScope's FiberGuide ® system has been the go-to fiber raceway choice for central offices, data centers and mobile switching centers for over 30 years. A web-based configuration tool that allows users to import layouts, design raceways in a 3D format and export detailed drawings and BOMs for easy. Full content visible, double tap to read brief content. Its spacious design reduces signal loss due to bends, making it ideal for data centers. Ensure efficient cable management in high-density environments with our 6" x 4" channel.
