To fix this, go into device manager and uninstall the driver and reboot. This should force it to download the newest available from Microsoft, then you should manually update from there using your motherboard's latest network driver that you can get from their. Fiber transmission, otherwise known as 1000BASE-X or 100BASE-FX depending on speed, is a type of communication interface that connects between two Ethernet PHYs. As opposed to traditional copper communication, fiber transmission has advantages such as faster linkup times as well as less signal. it's a JM Fibre router not 100% about the exact model but I think it's the ONU JF511 That has one gigabit ethernet port (labelled GE), and one that only does 100Mbit/s (labelled FE), make sure you're using the gigabit one. Update:I tested the connection with a new router and it seems it was my. I've connected my PC to the hub directly via a cable and checked that's running at 1Gbps speed and have also tried changing the cable between the ONT and the hub (tried two of the red terminated ones and another I know does gigbit speeds) and no luck. is this something I need to message BT about. Sometimes I unplug the cable from my computer and plugs it into a laptop, it makes the router recognize the laptop accepts more speed and unlock the 1Gb speed. This guide will walk you through diagnosing and resolving common. This article describes steps to perform when SFP/SFP+ fiber link is not coming up. Scope FortiSwitch and FortiGate. Ensure that a compatible transceiver is used.
