

Flexible grounding connection for distribution box

Overview

These locations are usually marked with grounding symbols for easy cable crimping. Connection Points: Dedicated bolts welded to the inside of the door panel must be tightened. They are used to establish reliable ground path connections, dissipate lightning strike energy, and prevent the build-up of electrostatic discharge. Special large form-factor straps are also employed in busbar applications for electrical power distribution up to 1000 Amps. Glenair supplies a. The StructuredGround™ Direct Burial Compression Grounding System sets the industry standard for underground electrical grounding connections. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Flexible Connection: Braided copper tape. - Provide high flexibility and excellent current transmission for your demanding applications wire ground strap.
