

How long does it take to maintain a mobile fiber optic cable

Overview

Perform fibre cable maintenance every 3 to 6 months, depending on the environment and usage intensity. High-traffic areas, outdoor routes, or mission-critical networks may require quarterly checks. Regular testing and inspection reduce the risk of unexpected failures. Effective lifecycle management of fiber optic cables, from selection and installation to daily maintenance and replacement, is essential. Thus, understanding the full lifecycle of fiber optic cables is essential not only for. Fiber optic cables have a long lifespan and can last up to 25 years or more with proper maintenance. The high-quality materials used in their construction make them resistant to corrosion, extreme temperatures, and wear and tear, allowing them to maintain their performance over a long period of. With proper maintenance, fiber optic cables can last 20-30 years, though their performance may degrade over time due to environmental factors or wear (18).
