

How to use the fiber optic pigtail protective sleeve

Overview

The protection sleeve you slid onto the pigtail earlier is now ready for use. Carefully slide the sleeve over the spliced area, ensuring the fused joint sits in the middle of the stainless steel reinforcement rod. Whether you're building new FTTH networks or maintaining existing ones, this guide will walk you through the types, materials, applications, and best practices for selecting and using fiber optic splice sleeves. What is a Fiber Optic Splice Sleeve?

A Fiber Optic Splice Sleeve is a protective tube. The most efficient way to terminate a fiber run is by using a pigtail. Unlike electrical cables, optical fibers are highly sensitive to bending stress, surface contamination, and uneven mechanical pressure. It's a transparent tube that acts as a strong. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. AFL offers a wide selection of fiber protection sleeves to meet any application.
