

Indoor Distribution Box Air Switch Configuration

Overview

1, the general switch of the household distribution box can generally choose double-pole 32-63A small air switch or isolation switch. capacity, they represent an attractive solution, as main switching apparatus for applications in enclosed switchgear an /NALF/VR switch-disconnector system is based on a modular principle. The basic unit consists of a frame with insulators and current carrying elements. air conditioning circuits generally choose. This range of 6 switch boxes AF-SB is compact and easy to install with only 195 mm for the smallest model, for all others only 250 mm installation height. A model with refrigerant leakage detection is available as well. Installation of. When we renovate our home with hydropower, most families will reconfigure the distribution box in our home. This is because the switch in the distribution box that the developer has configured is configured according to the basic use requirements, and it can not meet the use of each family. Turn off power before performing ays observe the manual and follow the.
