

Installation of the inlet distribution box baffle

Overview

Install Tee-Y baffle on inlet pipe if required. Lay D-Box completely level in bed of sand or clean soil. a calming baffles are perforated baffles typically installed downstream of the inlet device in horizontal 3 phase (gas/liquid/liquid) or 2 phase (liquid/liquid) separators covering the entire liquid section. Assemble Top frame members: (Top Yoke – Middle Bar – Top Yoke) Slide Middle Bar over Top Yoke shaft making sure the hole in the middle tube is facing horizontal and not up and down. Notice. There are well established industry rules and guidelines (such as API guides, Shell DEP's and NORSOK Standards) for the design of new separators and inlet/outlet devices when it comes to feed inlet and gas/liquid outlet velocity and momentum. Figure 1 shows a typical baffle box design. As water encounters the baffles. ide range of solids from stormwater runoff. The horizontal screen sits above the standing water level in.
