

Intelligent PDU Detection Equipment

Overview

An intelligent PDU enables power monitoring that can be of the overall PDU or in some models down to the individual outlet. Whilst some also provide remote switching that allows power to be remotely cycled. iPDUs serve as a centralized power management solution that enhances the efficiency, reliability, and monitoring capabilities of power. The next generation high-voltage intelligent power distribution unit (iPDU) monitors and manages all power distributed to power electronics and provides central protection for the electrical system. Remote power control, real-time energy metering, SNMP/Modbus integration. While both can provide reliable power distribution to critical IT equipment within a rack or cabinet, intelligent PDUs offer several smart features to help data center. Modular, compact intelligent PDU with inlet metering. Modular, compact intelligent. MPDU Pro is the latest flagship intelligent PDU introduced by CLEVER Electronic.
