### Overview

The “No Bootable Device” error in KVM can be addressed by checking the boot sequence, verifying disk attachments, and repairing the bootloader. Ensuring correct configurations and monitoring logs can prevent this error from reoccurring. Solution: First, check if the switch's power indicator light is on and ensure the power source is properly connected. If the problem. Now if I select PC1 on the KVM, and either turn it on and re-boot it leaving it selected, it will boot correctly and I can login on the console / through X and everything works correctly. This is how the error will look like: Hello, my computer (<https://gmktec.com/products/nucbox2-int.4k-mini-pc>) is multibooted using grub2, and is connected to a HDMI display ([This was purchased as supposedly working unit on ebay but upon starting with the power cable on, all I get is blinking green power led with consistent rate which means booting phase. After waiting for even hours, the blinking.](https://www.Only when I reboot from Arch Linux to Windows. Question Avocent MPU108E KVM-over-IP Switch is stuck at booting ?</a></p>
