

Mobile fiber optic router PPPoE not configured

Overview

To set up your router for PPPoE, simply access your router's admin panel, navigate to the WAN settings, select PPPoE as the connection type, and enter your provided username and password. This indicates that there are issues with the configuration, preventing your device from authenticating with your ISP. As far as I understand, I need a PPPoE username and password to connect. I never received it from Telekom, as well as Access number (Zugangsnummer). Maybe I'm wrong and the connection. Hopefully my problem is just a simple misconfiguration. My Asus GT-AX11000 running Merlin WRT version 386. The status page says that its connected and shows the static IP my ISP has. When I restart the modem, internet led stays orange and others blue and the pppoe connection won't show connected. Then I have to go into the Tether app-> pppoe settings -> tap save. PFA logs Any help is greatly appreciated. Thanks ☐☐
