

Safety briefing for laying optical cables in ducts

Overview

Work gloves help prevent cuts and bruises from sharp or rough edges on pipe/ducts and other objects. Wear high-visibility vests (at all times). The contractor shall ensure that all necessary guards, protective structures and warning signs are used to protect both workers and third. Fiber optic cable is sensitive to excessive pulling, bending, and crush forces. Any such damage may alter the cable's characteristics to the extent that the cable section may have to be replaced. It. Supervision before and after cable laying. Signage and dimensioning of work areas. Cable loops location. Besides the usual safety issues for all construction, generally covered under OSHA rules in the US (OSHA 10 and 30), fiber optics adds concerns for eye safety, chemicals, sparks from fusion splicing, disposal of fiber shards and more, covered in Part 1. Personnel involved in Optical fiber cable installation must be aware of all. If ducting proves clear, utilise rod / rope following correct procedure.
