

Serbian optical transceiver module QSFP-DD

Overview

The FS QSFP-DD Digital Coherent Optics (DCO) transceiver supports 400G coherent transmission for data center interconnect and metro/edge applications. This article provides a comprehensive comparison of mainstream optical transceivers, including SFP, SFP+, QSFP+, QSFP28, and QSFP-DD. It explains their technical differences, compatibility considerations, and ideal use cases to help readers choose the right module for enterprise and data center. Cisco QSFP-DD and OSFP 800G ZR/ZR+ digital coherent optics modules enable 800G traffic over amplified Dense Wavelength-Division Multiplexing (DWDM) links up to 120 km for 800ZR and over 1000 km for 800G ZR+. The module is based on the OIF 400ZR implementation agreement, with an IEEE 400GE Ethernet compliant host interface and a line interface. The QSFP-DD transceiver has become the standard format for 400G and 800G connections because it delivers backward compatibility and high port density and future-proofing protection which most installations need.
