

Should the distribution box be made of metal or ABS

Overview

Compared with traditional metal enclosures, an ABS Distribution Box provides enhanced corrosion resistance and flexible design options, making it especially suitable for renewable energy, photovoltaic systems, and outdoor electrical projects. An electrical distribution box serves as the vital physical barrier housing sensitive protective devices. This heavy-duty cabinet secures components like MCB s, RCBO s, SPD s, and live copper busbars. These features make them suitable for. The ABS Distribution Box has become a preferred solution in residential, commercial, and industrial applications due to its lightweight structure, excellent insulation performance, and strong impact resistance. Let's cut through the hype with real talk. We'll. The majority of non-metallic enclosures are made with plastic, typically ABS or polycarbonate, but this category also includes fiberglass. Non-metallics are permeable by radio frequency (RF) waves and make a good choice for wireless communication devices that need to easily send and receive.
