

Spectrometer Mounting Bracket

Overview

The bracket is a widely used optical measurement auxiliary bracket. The support rod is connected to another support rod through a square flange, and the circular flange fixes the collimator. Standard set of one includes two custom plastic brackets to fit a BLUE-Wave or GREEN-Wave spectrometer and mounting hardware. Newport spectroscopy accessories use a universal flanging system for quick integration and interchangeability, ensuring seamless expansion of your spectroscopy setups with maximum reliability. During the design and development of your SPECTROMeter careful consideration was given to the following points: For fast and prompt delivery, all necessary spare parts and consumable items are shipped by our logistics center. You can place your order by phone, fax, letter, email or on our Website. This email address is associated with more than one company. Please select the company you'd like to login to to continue: Medusa Radiometrics offers a range of mounting solutions to integrate our gamma-ray spectrometers with your survey platform — whether you are using a drone, quad, car, or conducting walking surveys. Below, we outline the available options to help you choose the best fit for your application.
