

Standard configuration of temporary primary distribution box

Overview

A typical primary distribution substation would include air-insulated outdoor-type high-voltage side (HV) and a metal-enclosed air-insulated indoor-type medium-voltage switchgear (MV). Engineered utilizing the latest in GFCI technology, Southwire's iconic yellow temporary power boxes have been providing contractors, electricians, and engineers with the highest level of electrical safety for over 35 years. A feeder usually begins with a feeder breaker at the distribution substation. This section concentrates upon commonly used power distribution equipment: Panelboards, Switchboards, Low-Voltage Motor Control. A primary distribution substation is the connection point of a distribution system to a transmission or a sub-transmission network. Getting the selection wrong means more than inconvenience—it can mean shutdowns, damaged machinery, or worse. The considerations that follow cover.
