

Switch connected to multiple ring networks

Overview

In this setup, a single central switch participates in multiple independent ring networks, each formed with other switches. These rings may serve different departments or subsystems while sharing the same core switch. It enhances port utilization and centralizes control without. This document provides basic background information regarding adding ring redundancy in your wired Ethernet networks. It will explore the N-Tron proprietary protocol N-Ring and how it is a step up from IEEE Spanning Tree and Rapid Spanning Tree Protocol (STP, RSTP). DLR network includes at. A fiber optic ring network is a physical or logical network topology where devices (usually switches) are connected in a closed-loop using fiber optic cables. This design ensures data can travel in both directions. The individual PROFINET lines lead from IO device to IO device.
