

Test whether the fiber optic box patch cord is powered on

Overview

This is your "QuickStart" guide to testing fiber optic cable plants, patchcords and communications equipment with a fiber optic light source and power meter. Fiber optic patch cord is an optical transmission line connects fiber optic devices or fiber optic networks, it consists of two fiber optic connectors and a fiber optic cable. [com/products/f1-8513hr](https://www.pvprojekt.com/products/f1-8513hr) In this video, we are introducing one portable hand held optical power meter. Patch cords or equipment jumpers are used to bridge the network electronic ports to the fiber optic link. Equipment cords are an integral part of any network—whether it's a fiber jumper used to make connections between fiber patching areas and switches in the data center or a copper patch cord out in the LAN to connect end devices to the work area outlet. Just go to the topics below to find the information you.
