

The distribution box does not have a main switch installed

Overview

In these instances the panel in the home is not the main service panel but is instead called a sub-panel or remote distribution panel. A main breaker, or service disconnect, is a single switch designed to interrupt all electrical power flowing from the utility company into a home's electrical panel. This component is present in most modern load centers, providing a quick, centralized means to de-energize the entire system for. A home electrical panel might not have a main breaker because it's a split-bus panel (common in 1950s-1970s homes), has a main disconnect located elsewhere, or uses a rule of six design 1 with multiple disconnect switches instead of a single main breaker. " It might be---but because most electrical panels are NOT installed by homeowners or handy persons, it is actually pretty rare to find a main panel with out a main disconnect. Does anyone see something that I don't?

The condo was built in 1978. This is one of those times when you need to call in a professional! There is probably a main switch for the entire building that they.
