

The switch s optical port is not outputting a signal

Overview

What it means: The module carries an authentication or signature byte that the switch checks; when the check fails the switch refuses to enable the port. This is a deliberate vendor control to prevent third-party optics. What to do: Use vendor-approved optics where. If the same port with the same optical module has link, then I do get a proper readout of the optical monitor command (tx power / rx power / temps / current). Being able to monitor a non-working link is a pretty basic thing to do to be honest and having access to DDM/DOM/optical monitoring of down. Hello jam, The issue is definitely with ports getting channelized. Check compatibility between the optical module and switch Most switch brands have specific compatibility requirements. I have problem with optical link (1000SX) on Cisco Catalyst 9300 (C9300-48T). Confuguration this port: Onother swicth C9200 connects to this port Te1/1/3. I think this problem is in only C9300 because we have onether problems with. Have you ever experienced an unexpected network outage due to the failure of an SFP/SFP+ optical transceiver?

Network outages can bring your ability to communicate and work to a halt, and your IT team will likely be frantically looking for a solution.
