

US AI Server OSFP

Overview

6T OSFP224 optical module is a next-generation transceiver that delivers 1.6Tbps bandwidth using 224G SerDes technology. It is designed for high-performance AI data centers, enabling ultra-high-speed interconnects between switches and compute nodes. The current AI training clusters need network bandwidth that exceeds the capabilities that existed five years earlier. 6T networking. Our OSFP Cable Assemblies support up to 1. The 800Gb/s OSFP Transceiver offers fast, flexible connectivity, and the Mini Cool Edge. In an AI cluster, one flaky optical link can turn your training run into a very expensive nap. This article helps data center engineers and field techs choose the right '800G OSFP transceiver AI' optics for GPU-heavy racks, with real compatibility checks, operational limits, and troubleshooting. According to TrendForce, 800G transceiver shipments are projected to explode from 24 million units in 2025 to 63 million in 2026 — a 162% year-over-year surge driven almost entirely by AI infrastructure buildouts.
