

What are two fiber optic pigtail connectors called

Overview

A simplex fiber optic pigtail, for example, has a single fiber and a connector on one end, while a duplex fiber optic pigtail has two fibers and two connectors. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create fast, reliable, and cost-effective terminations. Understanding these differences is essential for choosing. What is Fiber Pigtail?
