

What tools are needed for cold splicing

Overview

Fiber Optic Stripper: This tool is used to remove the outer coating and buffer from the optical fiber, exposing the glass core and cladding. Using the tables below for selecting preparation and splicing tools, you can. When hot or cold splicing, rubber covers and plies must be stripped or removed from the belt. Stripping fabric should be done in the step down method so that the same ply on one end does not overlap the step or ply on the other end. Our recommendations are the result of field tests and long. That is why choosing the right splicing technique is critical for packaging operations that depend on precision and speed. With the right. 210: Keep away from heating, spark, open flames, hot surfaces. Do not smoke! P 280: Wear safety gloves/safety clothes/safety glasses and face mask. P 273: Avoid effluent on environment. 301+310: IF SWALLOWED: Contact poison center or doctor immediately. The splicing methods for all belt.
