

Which port of the LC optical module receives light

Overview

The connector integrates two LC (Lucent Connector) interfaces in a single compact housing, allowing one fiber to transmit optical signals (TX) and the other to receive them (RX). Optical LC Receptacle (transceiver, front view) Reference: IEC specification IEC 61754-20. The fiber which connects transceiver A's lane 1 must end at transceiver B's lane 2. The RJ-45 connector is used to connect a Category 3, Category 5, Category 5e, or Category 6 foil twisted-pair or unshielded twisted-pair cable from the external network to the module interface connector. Category 5e, Category 6, and Category 6a cables can store large levels of static electricity. Amphenol's 100G QSFP28 optical modules include SR4, AOC, AOC break out, CWDM4, LR4, ER4 Lite, ER4 and ZR4 series, which adopt LC or MPO optical ports and are compatible with IEEE802. It features a small form factor design with a 1.
